This is important in the clinic because physical therapists do not always have time to measure a patient's gait speed multiple times in one session. If measuring gait speed over a distance of 4 meters, the patient is commonly instructed to walk at a normal pace (self-selected speed) down a hallway through a 1-m zone for acceleration, a central 4-m "testing" zone that is timed with a ...

What is a focal to bilateral tonic-clonic seizure (secondarily generalized seizure)? These seizures are called focal to bilateral tonic-clonic, because they start in a limited area on one side of the brain and spread to involve both sides.This is different from a generalized onset tonic-clonic seizure, which starts on both sides of the brain.
